

**PTM Invest holding a.s.**

Our holding is represented by

**S&M Group Ukrainian Technology Holding**

and we would like to introduce them to you

**S&M Group (CSG) is a holding that continues the traditions of Ukrainian industry. It supports the development of traditional Ukrainian companies engaged in defense, energy and civil industrial production and trade. In companies that are part of the S&M holding, monsters of the Ukrainian industry.**

**The C&M holding company was created to unite the industrial potential of Ukraine, and give a new impetus to development and cooperation in world markets.**

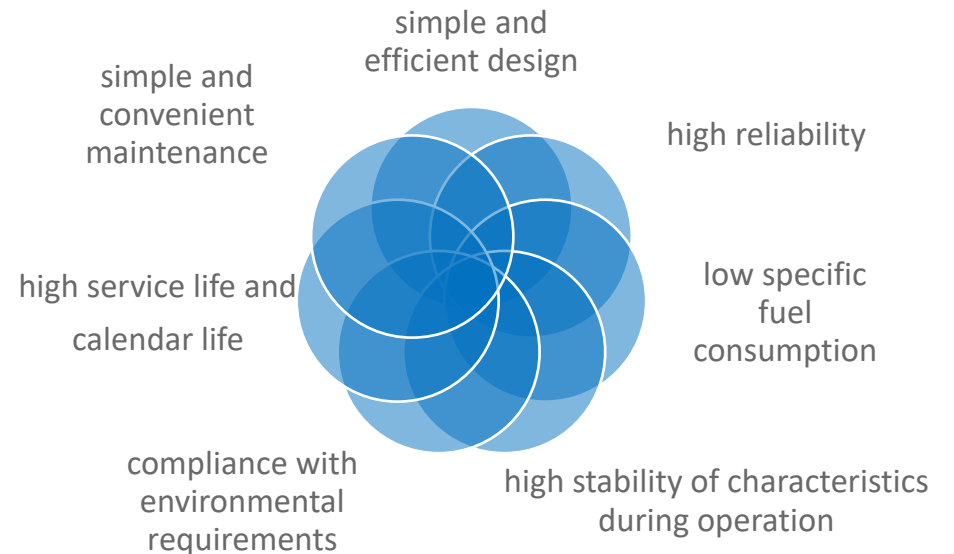

## Turbo equipment

Our holding company, taking into account your needs, can deliver the equipment you are interested in in the shortest possible time, on favorable terms for you, and carry out commissioning and commissioning work. Provide further servicing of the supplied equipment.

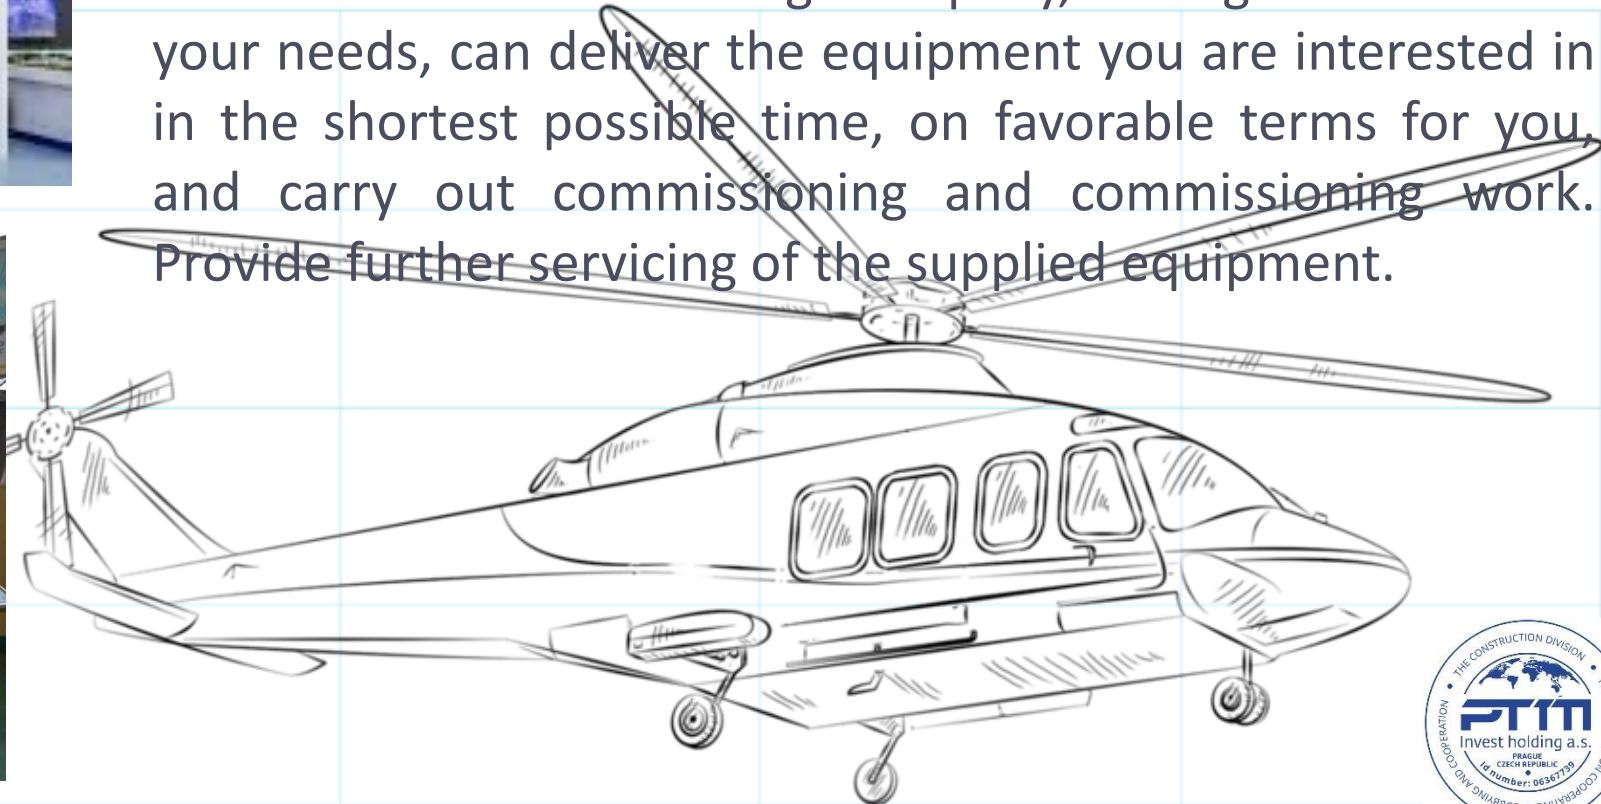

Our turboprop engines are installed on all types of helicopters. Developed and produced gas turbine engines are installed on domestically produced vessels and ships, as well as on foreign analogues. DPA turbines for gas pumping, heat and electricity generation are produced. Our engines work in many countries of the world and on all continents.

## Turbo equipment

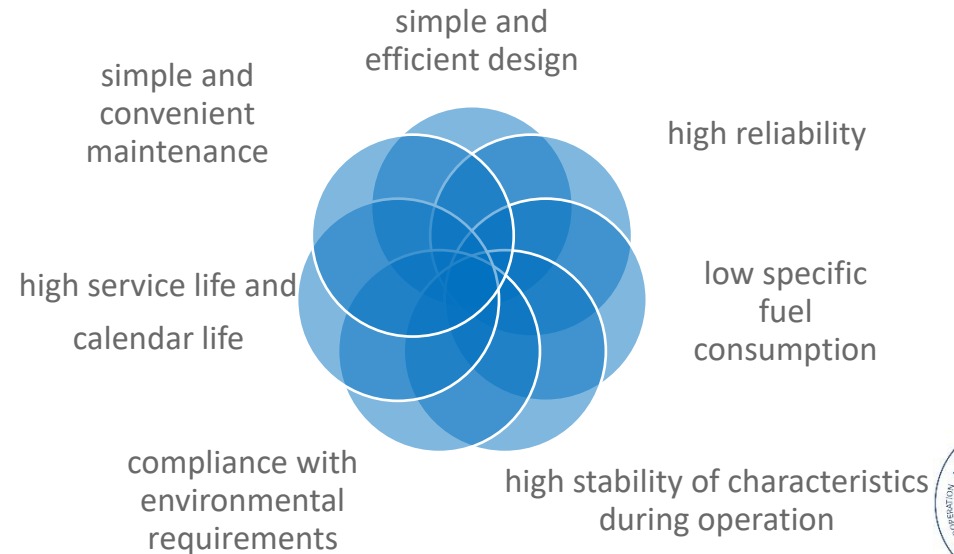

Over many years of operation, Ukrainian power turbines have proven themselves as reliable, easy to operate and repair, durable and unpretentious units, which gives us an advantage over similar installations of foreign manufacturers. Our holding company, taking into account your needs, can deliver the equipment you are interested in in the shortest possible time, on favorable terms for you, and carry out commissioning and commissioning work. Provide further servicing of the supplied equipment.

## Yachts and boats

Our company brings together professionals with many years of experience in building yachts, sailing enthusiasts and yacht captains. The yacht builder is engaged in construction, conversion and modernization of sailing and motor yachts from shipbuilding steel and AMG.

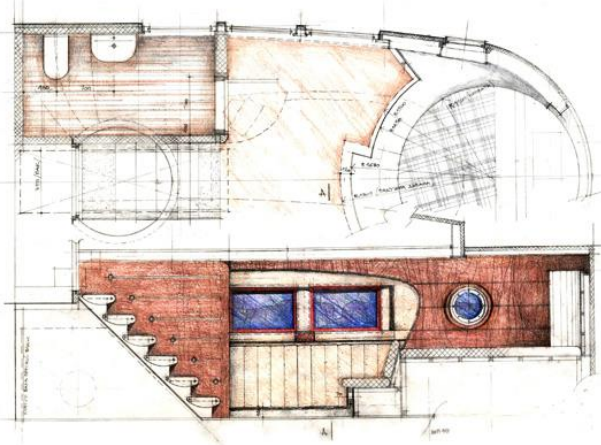

The specialists of the yacht building shipyard have experience in the repair and restoration of wooden yachts, changes in the overall design of individual rooms, repair of deck coverings, professional installation of teak flooring of any complexity. We perform qualitative work on the final finishing of the outer surfaces of the sides and superstructures of yachts, using materials from well-known manufacturers. Yachts built by our company are distinguished by modern design, original solutions, decent level equipment and quality materials. ## Yachts and boats

### Construction

- construction of new motor and sailing yachts according to standard and individual projects
- restoration and re-equipment of motor and sailing yachts
- design and technical equipment of any level of complexity

### Design

- design of motor and sailing yachts for river and sea navigation (yachts and boats)
- exclusive interior design (from economy to elite class)

### Accompaniment

- registration of the entire package of necessary documents (domestic and international)
- •legal support for transactions of sale and purchase of yachts
- • sale of yachts
- •repair, painting and maintenance of yachts
- selection of crew and attendants for the yacht

## metal & Metal products

Our company has the technical ability to produce from raw materials, as well as to supply corrosion-resistant pipes manufactured in accordance with the regulatory and technical documentation in force in the CIS countries (Government standards and Technical Conditions) and international standards (ASTM and DIN).

Durability, resistance to external influences

Resistance to corrosion

No expansion at high temperatures

The smoothness of the inner surface allows to improve the throughput

## metal & Metal products

Seamless pipes are the most reliable and durable products, widely used in various areas of industrial production. To obtain them, the steel billet is heated to a certain temperature according to the technological process, after which a hole is created inside the workpiece. The prepared blank can be stretched, calibrated, and trimmed.

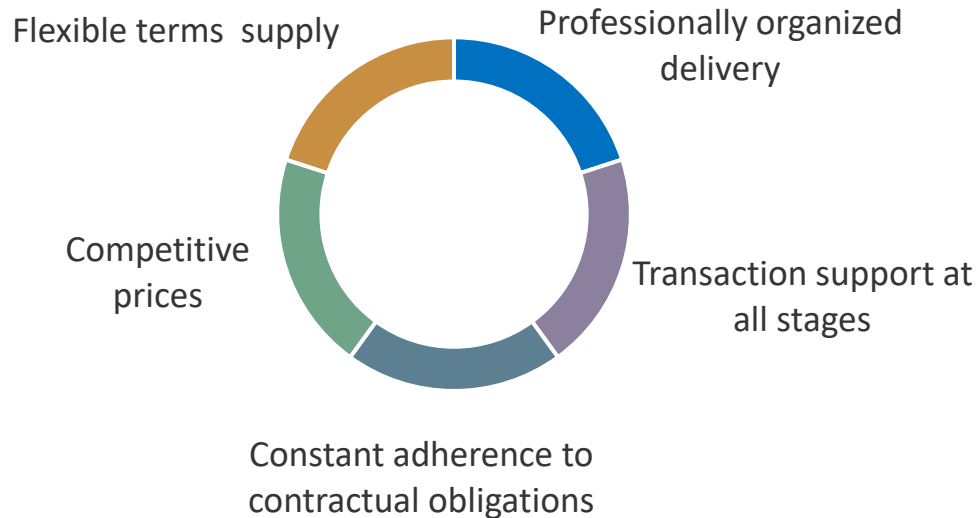

## Trancformers

One of the main directions of our company is electrical equipment such as TM and TMG power oil transformers; complete transformer substations (KTP) of various types and purposes; as well as a large range of products that are used in the energy sector.

We honestly fulfill our obligations in the stipulated time, we can offer you reasonable prices and the shortest production times. We will be glad to cooperate

**We have created the best conditions for cooperation**

## Trancformers

Transformers of the TMG type are often used for industrial and commercial purposes, for example, for powering electrical devices and equipment in production. It can also be used as a power source for lighting and heating.

## Vessels and Ships

Shipbuilding, repair and modernization Enterprise "S&M" Ukrainian Technological Holding offers a wide range of services in the field of shipbuilding, repair and modernization. Our company has extensive experience in the international market and cooperates with the largest shipbuilding companies of Ukraine, such as Flagmanyachts, Ocean.

### We have created the best conditions for cooperation

# Vessels and Ships

## Vessels and Ships

### Company services

Our company specializes in providing services in the field of shipbuilding and ship repair. We have extensive experience in this field and are ready to offer our customers high-quality services at any stage of the ship's life cycle:

- ✓ Design, construction and maintenance of various types of vessels, including container ships, tankers, multi-purpose cargo vessels, passenger vessels and others. We will develop an individual solution that takes into account all the requirements and wishes of the customer, we will carry out equipment installation and testing.
- ✓ Repair and modernization of existing vessels. We provide a full range of ship repair services, including replacement and repair of equipment, electrical parts, as well as body work and painting. Our company has modern equipment and highly qualified personnel, which allows us to carry out work of any complexity and ensure high quality of execution.
- ✓ We provide warranty and post-warranty service for built vessels and installed equipment. We provide quality support and prompt response to all customer requests to meet their needs and ensure long-term relationships.
- ✓ We offer consulting services to our customers to help them make the right decisions regarding the construction, repair and maintenance of their vessels. Our experts have extensive experience in this field and can help customers choose the best solutions for their needs.

## Airplanes and Helicopters

Aircraft Ukraine is the world's aircraft-building country. We have created such aircraft as AN-125 "Ruslan", the world's largest transport aircraft An 225 "Mriya". Sergey Sikorskyi, the future "Guru" in the field of helicopter creation, whose company is a world leader in the field of helicopter construction, was born in Kyiv, studied and began to design his first helicopters. At the same time, marine-level Ukrainian enterprises design and manufacture aviation engines, which are not only incomparable, but also superior to foreign analogues in some technical and design indicators.

We would like to offer you for consideration the delivery of Ukrainian-made Mi-2 MSB helicopters to your address.

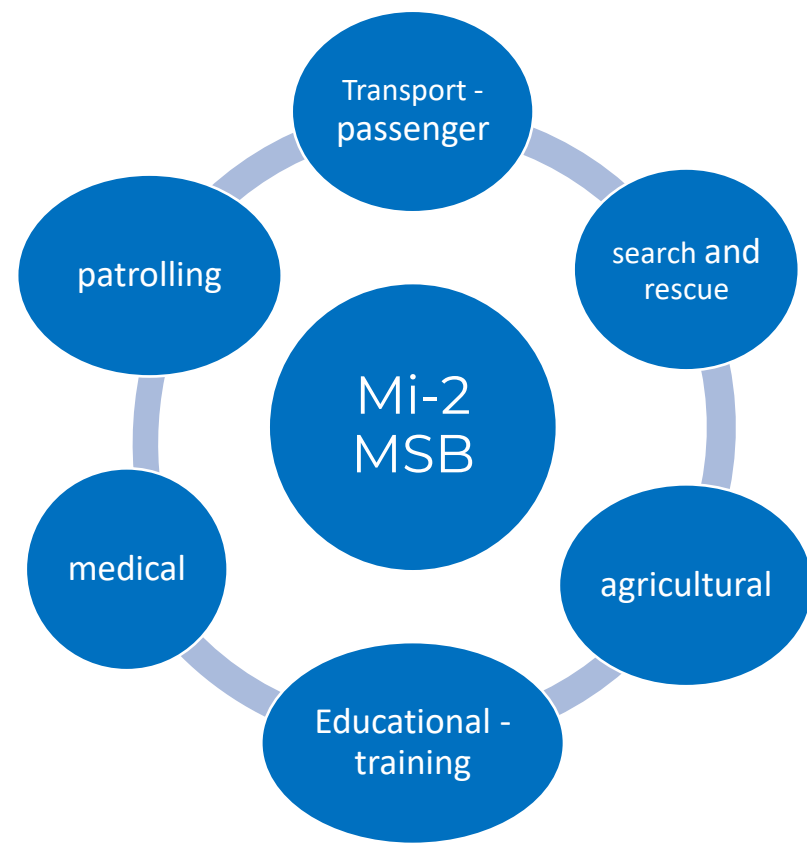

Mi-2 MSB became the first certified helicopter in the light class of Ukrainian production in 2014. The main change of the typical analogue is the replacement of the "old" VMD - 350 engine with new AI - 450 MB engines, developed by Ukrainian designers and built at a Ukrainian enterprise.

The MI 2 MSB multi-purpose helicopter differs from other light class helicopters in its spacious cargo-passenger cabin and two-engine power plant. The power of each engine compared to the previous power plant has increased by - 30 horsepower. After changing the shape of the hood, the helicopter began to look more modern and dynamic.
